# Project GtG Guild to Guild

## Problem

There are no convenient integrated mechanisms in solana to work for guilds in GameFi. Therefore, it is difficult for players to build effective interaction, cooperation and communication.

# Mission

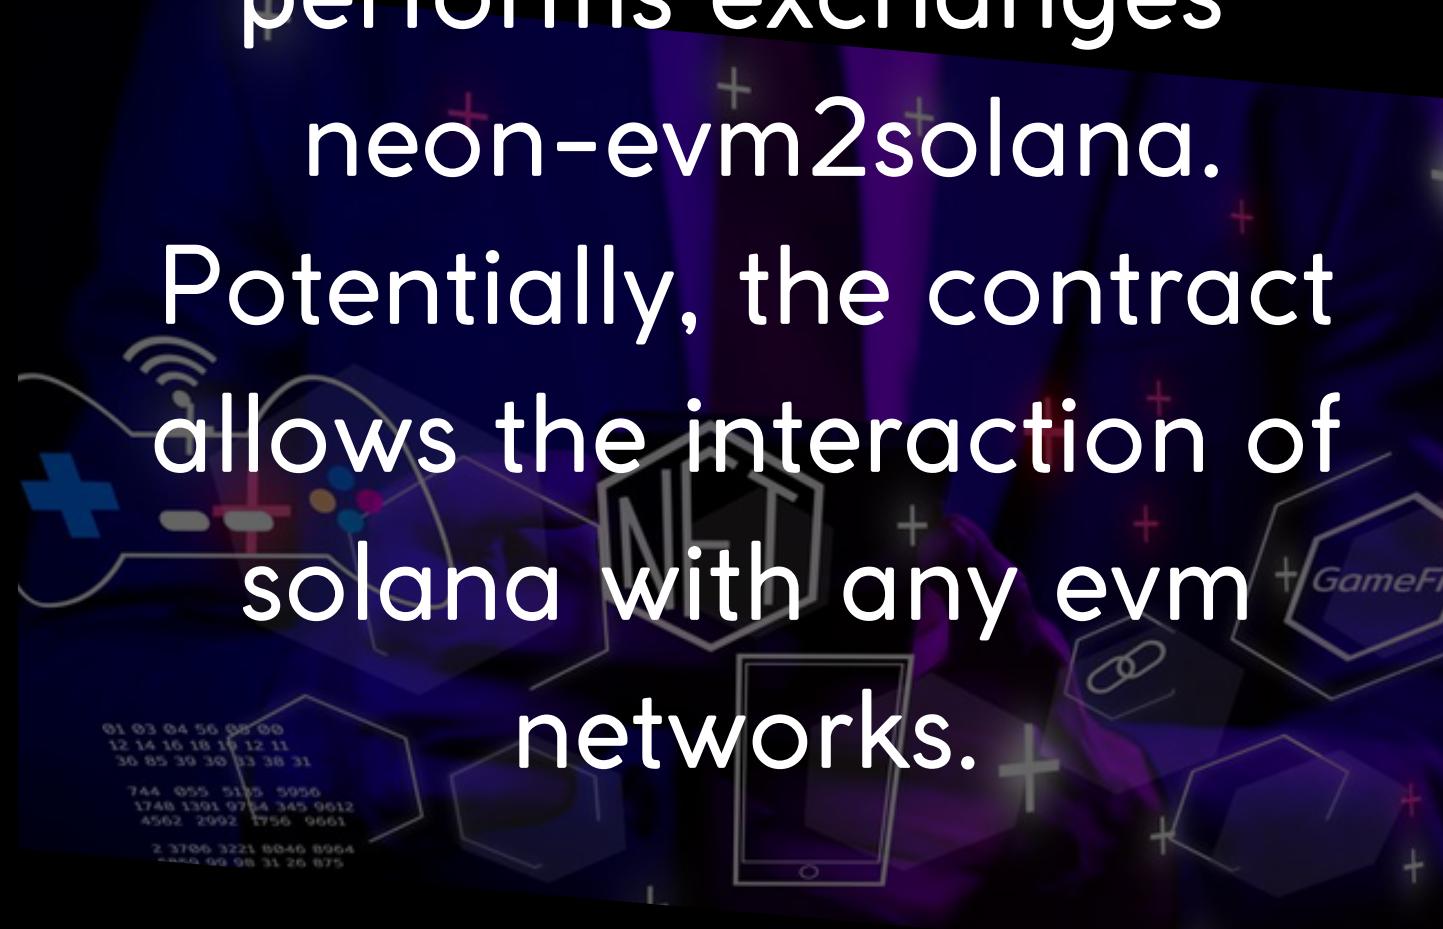

The mission of our project is to modify Solana's blockchain to improve the user experience for players and expand solana's reach by leveraging interconnectivity

# Novelty

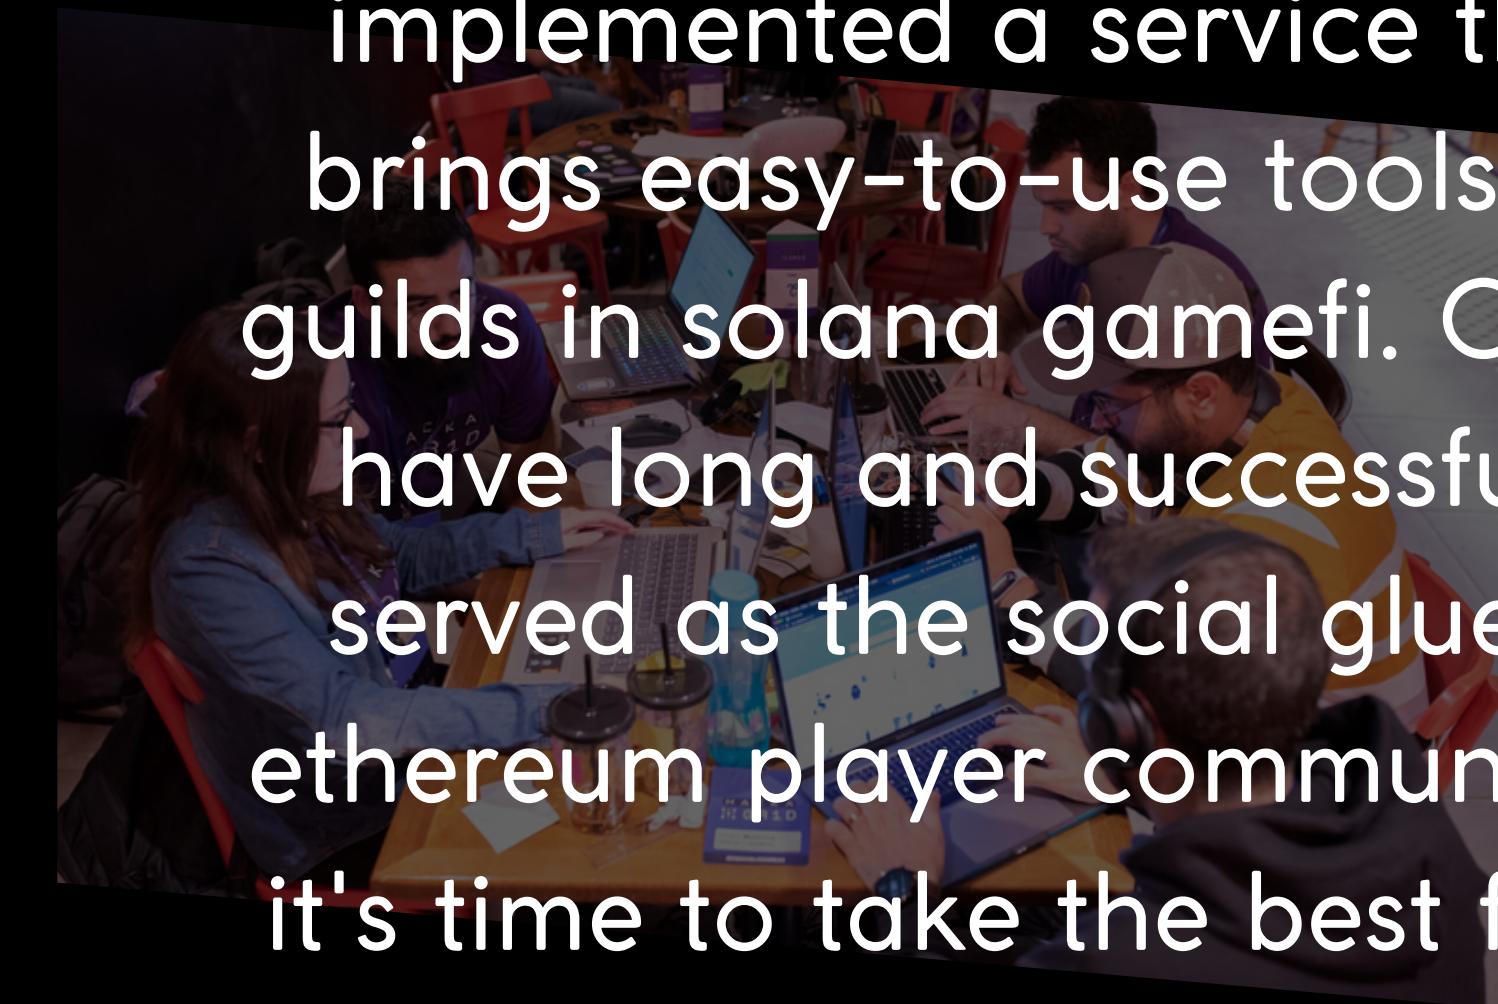

New type of market  
Already now our project  
performs exchanges

neon-evm2solana.

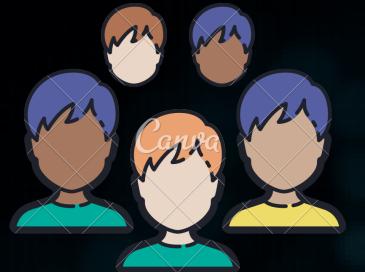

Potentially, the contract  
allows the interaction of  
solana with any evm  
networks.

New grade of socializing  
We've designed and  
implemented a service that  
brings easy-to-use tools for  
guilds in solana gamefi. Guilds  
have long and successfully  
served as the social glue in  
ethereum player communities,  
it's time to take the best from  
guilds in Solana.

# Success factors

Increased  
number of  
players

Convenient site-  
to-site  
interchange

an open offer of an  
NFT set for barter

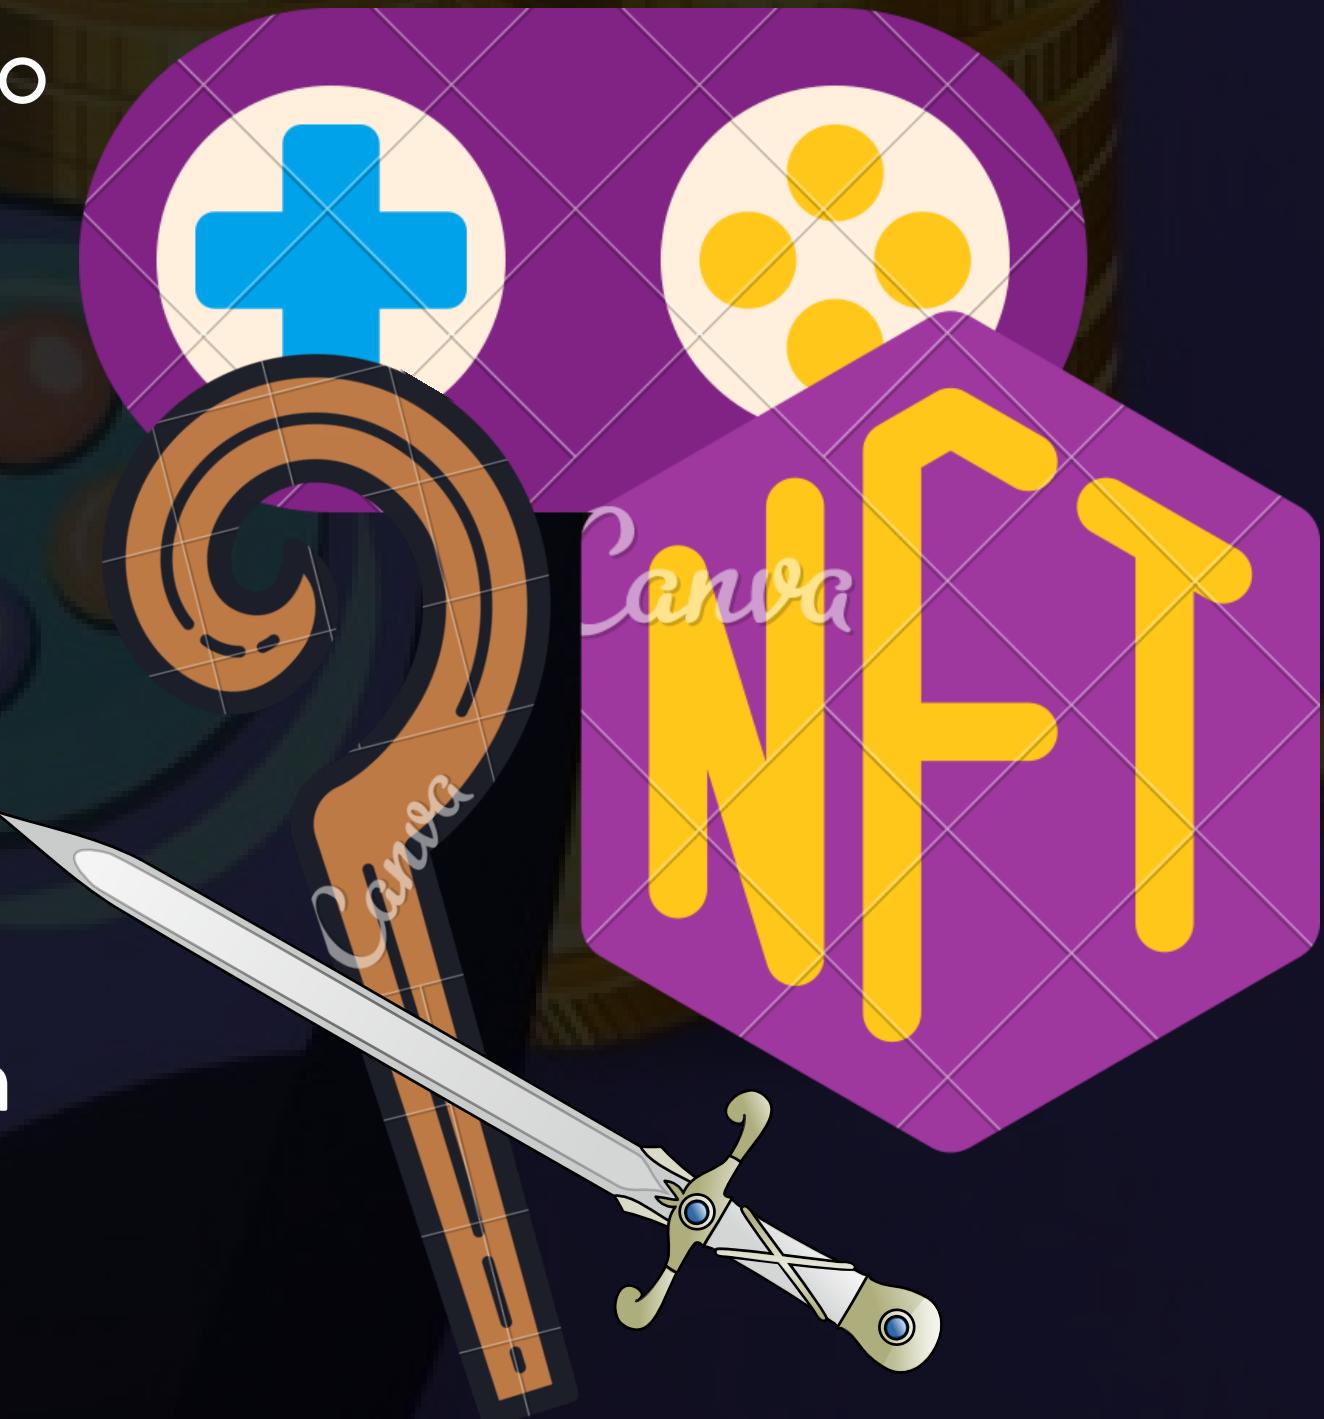

NFT's unique rental  
mechanism

# How GtG barter works?

1. Barter allows users to exchange NFTs without knowing each other, without requiring one user to trust the other and the platform.
2. Barter allows the user to not have to think about what standard their NFT supports. A smart contract allows you to work with almost any NFT on the market.
3. Barter allows users to exchange NFTs between networks.

# How GtG rent works?

- Guilds offer their NFTs on GtG;
- Guilds negotiate on the platform about rental terms, amount of deposit, and other conditions;
- For the duration of the rent, the pledge is deposited on the platform;
- At the end of the NFT rental period, the profit of the pledge location is returned to the owner, GtG retains a percentage;
- At the end of the day, the renter guild will pay nothing for "renting" the NFT.

Audience  
growth

More  
games

The impact the  
service will have on  
the industry is hard  
to overestimate

Investments

More  
mechanics

# Design + UX

The screenshot shows the GENOPETS application interface. At the top left is the 'GtG Gold to Gold' logo. In the center is the 'EcoPETS' logo. At the top right are account details: '0x1259' with a blue icon, '115.3047' with a green icon, 'Neon Devnet', and a 'logout' button. Below the header is a navigation menu with 'Home', 'Barter', 'Rent', and 'Withdraw' options. The main area is titled 'GENOPETS' and describes it as 'The World's First Move-to-Earn NFT Game'. A sub-section titled 'Exchange' is selected. It displays a 3x3 grid of 9 NFT items, each labeled 'Genesis Habitat #XXXX' and 'A level 1'. The items are colorful, pixelated structures. A large, semi-transparent image of a purple, multi-limbed creature is overlaid on the bottom right of the grid.

The intuitive interface of our application does not require any special knowledge. You can start working right away. See it on YouTube below

Barter demonstration

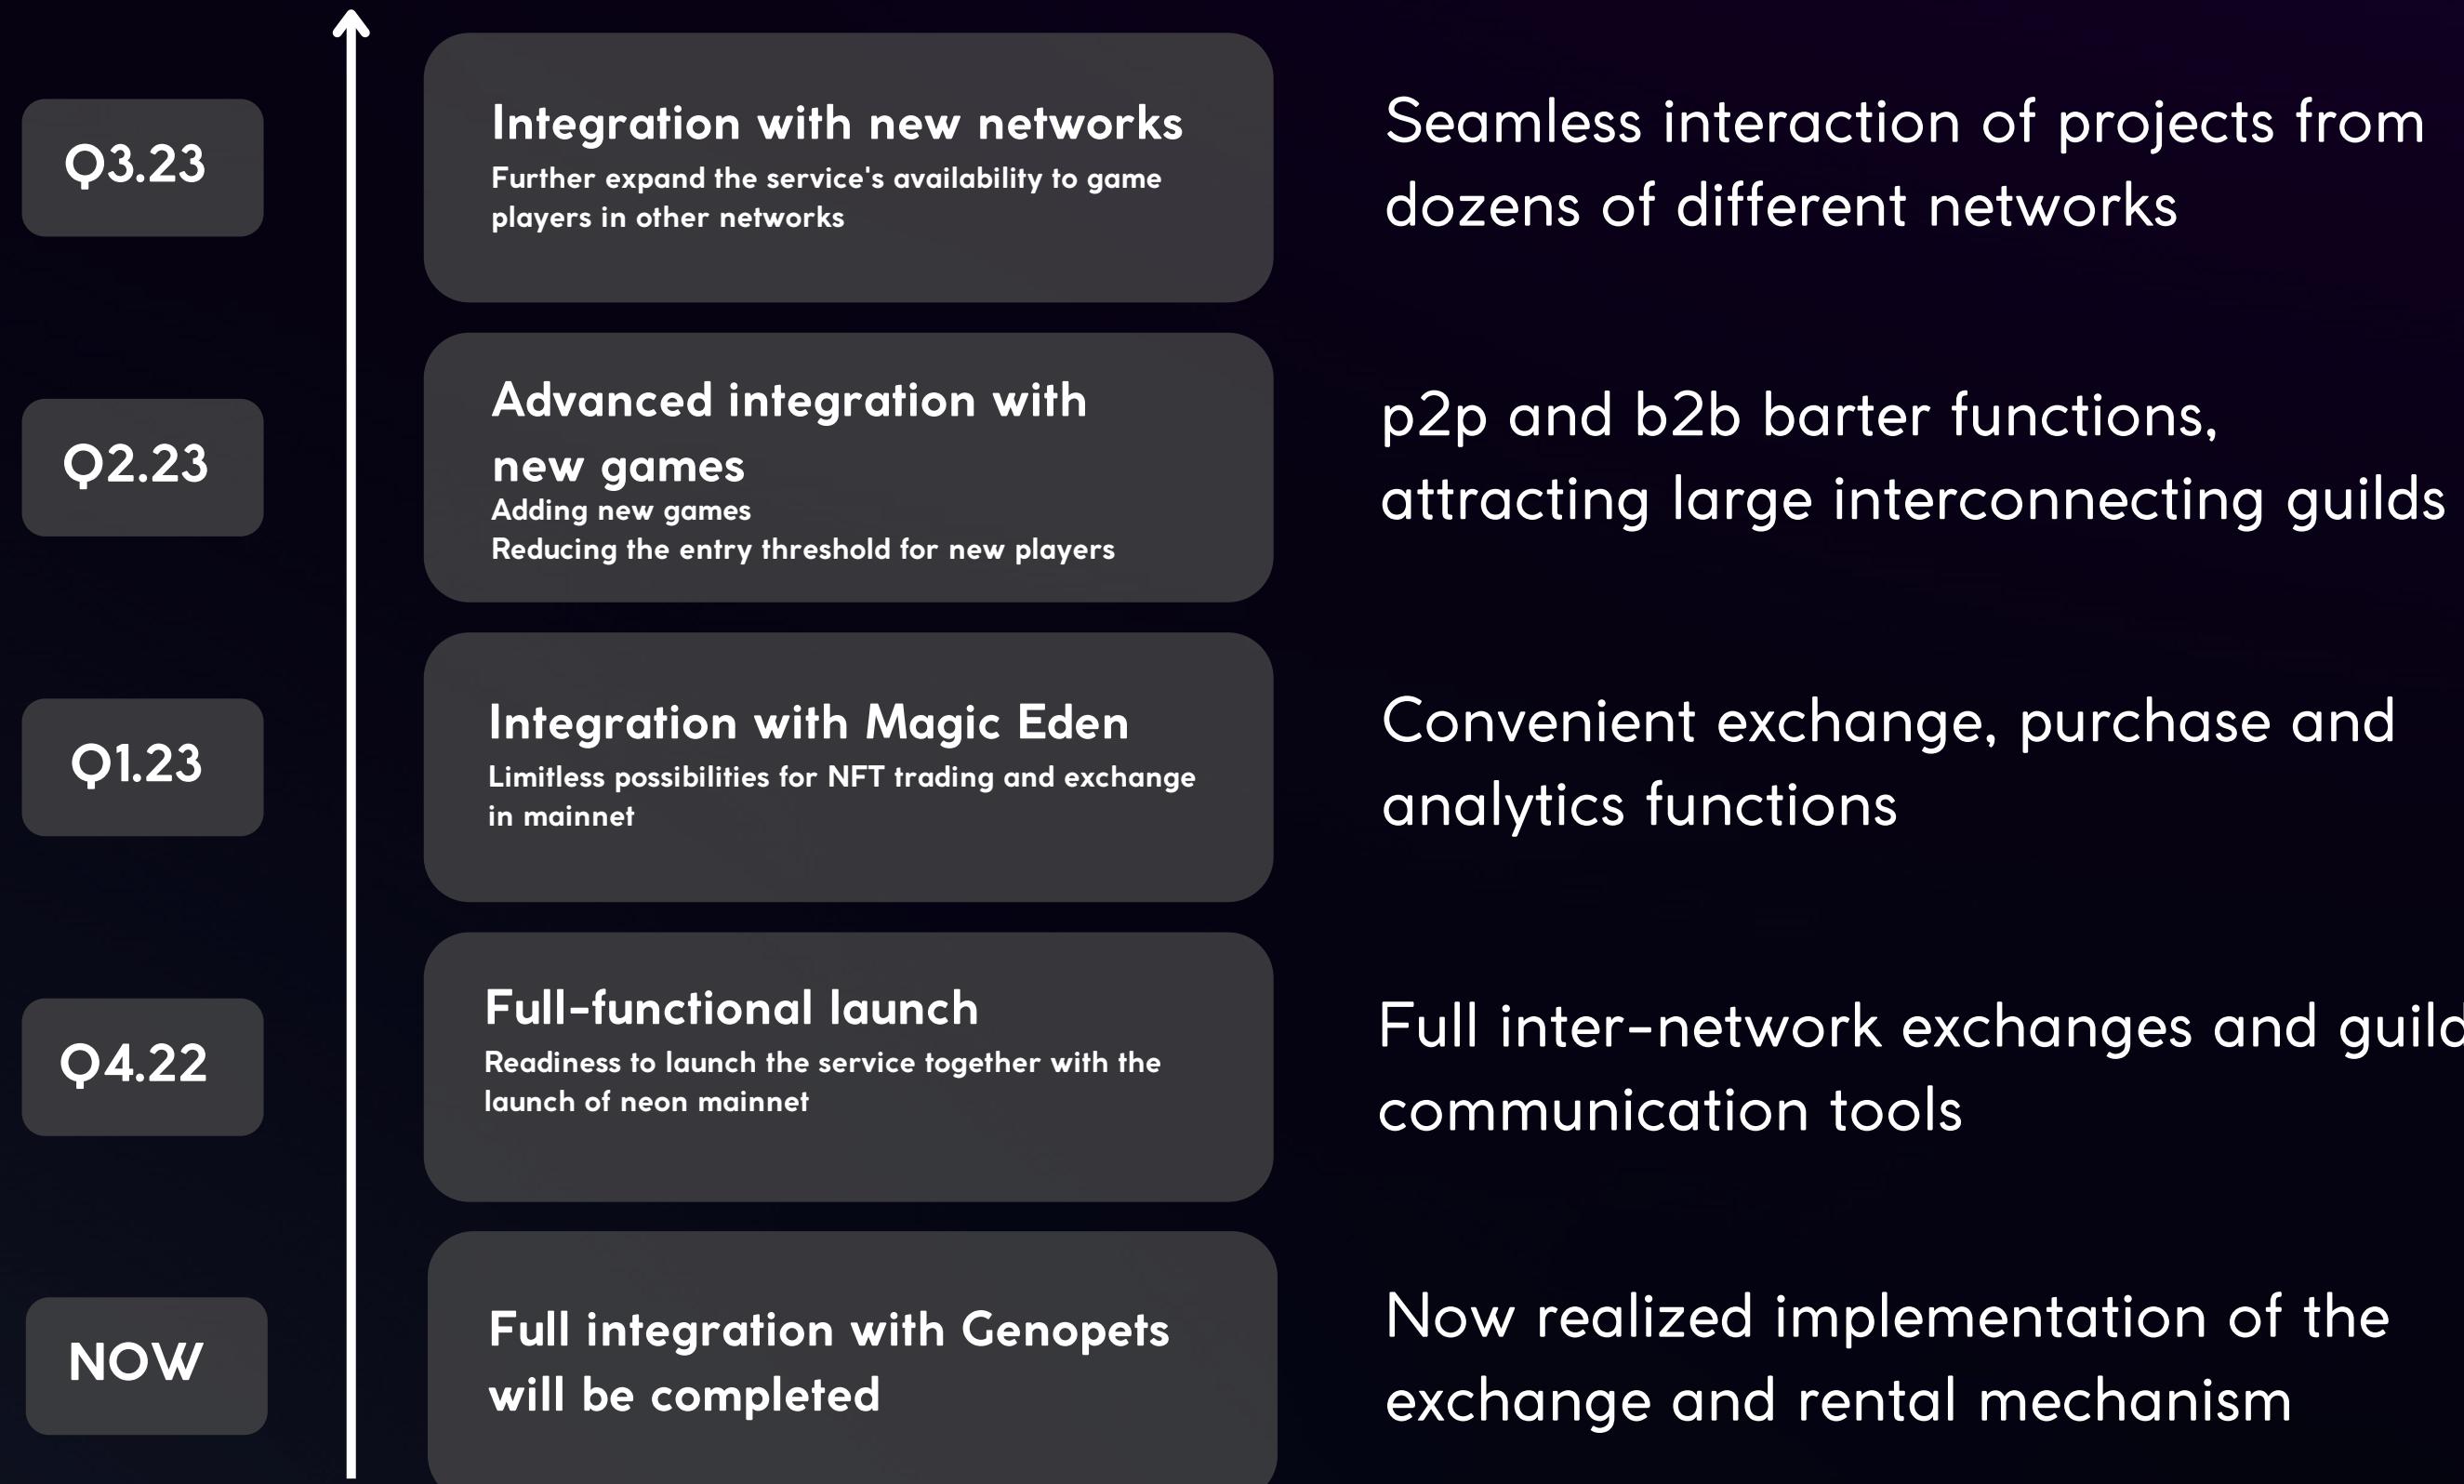

Rent demonstration

# Composability

GtG compatible with all NFT  
standards: 1155, 721, spl-tokens

GtG compatible with all evm networks:  
polygon, optimism etc.

# Roadmap

# Business Plan

The project will be monetized through:

1. Percentages from staking on Mora Swap on NFT rentals
2. Advertising and integration of GameFi projects
3. Monetization of social user interactions

We do not plan to launch our protocol token because it is not a necessary part of the site and will distance the project from the end users.
